

Product Profile

Identification

Product Name: Amino Terminated Polystyrene

Product Lot Number: P11123A-SNH2

Chemical Architecture:

Composition:

Mn (g/mole)	15,000
Mw (g/mole)	20,000
Mw/Mn	1.35
Primary Amino group test using ninhydrin	Blue color pass

Method of Synthesis

Amino terminated polystyrene was synthesized by anionic living polymerization with different end-grouping strategies. The reaction schemes are shown below:

Solubility in different solvents:

THF	√	Methanol	X
CHCl_3	√	Hexane	X
Toluene	√		

Validation of Architecture

A. Gel Permeation Chromatography (GPC), SEC Profile:

The molecular weight and polydispersity index of this polymer were determined by size exclusion chromatography (SEC) using a Varian liquid chromatograph equipped with a UV and refractive index detector. However, amino terminated polystyrene was found to interact with chromatography columns and therefore the amino group was protected by reaction with 1-naphthyl isocyanate before GPC analysis. Removal of the protecting group was confirmed by UV spectroscopy and the degree of functionality was confirmed by titration with HClO₄ using crystal violet as the indicator.

P11123A-SNH2

Size exclusion chromatography of monoamino terminated polystyrene.
(NH₂ group end capped with 1-naphthyl isocyanate)
 $M_n=15,000$, $M_w=20,000$, , $PI=1.35$, functionality=0.98.
