

Sample Name: Poly(n-Octyl methacrylate)

Sample #: P43666B-OMA

Structure:

Composition:

Mn x 10 ³	PDI
43.0	1.02

Synthesis Procedure:

Poly(n-octyl methacrylate) is obtained by living GTP process. The polymerization scheme can be illustrated as follows:

Characterization:

The molecular weight and polydispersity index (PDI) are obtained by size exclusion chromatography (SEC) in THF. SEC analysis was performed on a Varian liquid chromatograph equipped with refractive and UV light scattering detectors. Three SEC columns from Supelco (G6000-4000-2000 HXL) were used with triple detectors from Viscotek Co. ¹H NMR analysis was carried out on Varian instrument at 500MHz.

Solubility:

Poly(octyl methacrylate) is soluble in THF, CHCl₃. The polymer precipitates from hexanes, methanol, and ethanol.

HNMR spectrum of the product:

SEC elugram of the Sample:
