

## Sample Name: Poly(t-butyl acrylate)

Sample #: **P11388-tBuA**

### Structure:

### Composition:

Mn x 10 <sup>3</sup>	PDI
207.0	1.14

### Synthesis Procedure:

Poly(t-butyl acrylate) is obtained by anionic process.

### Characterization:

The molecular weight and polydispersity index (PDI) are obtained by size exclusion chromatography (SEC) in THF. SEC analysis was performed on a Varian liquid chromatograph equipped with refractive and UV light scattering detectors. Three SEC columns from Supelco (G6000-4000-2000 HXL) were used with triple detectors from Viscotek Co.

### Solubility:

Poly(t-butyl acrylate) is soluble in THF, hexanes (low MW), toluene and CHCl<sub>3</sub>. This polymer precipitates from ethanol and methanol containing 10-15% water.

### SEC of Sample:

**P11388-tBuA**

Size Exclusion Chromatography of Poly tert-Butyl acrylate

Mn : 207,000 Mw: 235,000 Mw/Mn 1.14

T<sub>g</sub> of poly t-butyl acrylate as function of molecular weight
