

Sample Name: Poly(1-adamantyl methacrylate)

Sample # P13209-ADMMA

Structure:

Composition:

$M_n \times 10^{-3}$ (g/mol)	1.5
M_w/M_n	1.2
Microstructure tacticity:	hetero:iso:syndio = 37:5:58
Glass transition temperature:	$T_g = 168^\circ\text{C}$

Synthesis:

Poly(1-adamantyl methacrylate) is obtained by group transfer polymerization (GTP) method.

Characterization:

The molecular structure and purity of the polymer were confirmed by proton NMR spectroscopy.

The molecular weight and polydispersity index (M_w/M_n) of the polymer were obtained by size exclusion chromatography (SEC) using THF as an eluent.

Thermal analysis was performed on TA Instruments Q100 differential scanning calorimeter (DSC) under a nitrogen atmosphere. The glass transition temperature (T_g) of the polymer was measured at a scan rate of $10^\circ\text{C}/\text{min}$ shortly after creating thermal history of the sample.

Solubility:

Poly(1-adamantyl methacrylate) is soluble in THF, chloroform, toluene, and 1,4-dioxane. The polymer precipitates from hexanes, methanol, and ethanol.

SEC elugram of the polymer:

P13209-ADMA

Size exclusion chromatograph of Poly adamantyl methacrylate:

$M_n=1500$, $M_w=1850$, $PI=1.2$

DSC thermogram (2nd heating scan, $10^\circ\text{C}/\text{min}$):
