

Sample Name:
Poly(styrene-b-4-hydroxy styrene)

Sample #: P18008A-S4OHS

Structure:

Composition:

Mn x 10 ³ S-b-4HOS	Mw/Mn (PDI)
29.0-b-14.0	1.2

Synthesis Procedure:

Poly(styrene-b-4-methoxy styrene) is prepared by living anionic polymerization by sequence addition of styrene followed by 4-methoxy styrene. The obtained polymer converted to Poly (styrene-b-4 Hydroxy styrene) di block copolymer. The reaction scheme is shown below:

Characterization:

An aliquot of the polystyrene block was terminated before addition of 4-hydroxystyrene and analyzed by size exclusion chromatography (SEC) to obtain the molecular weight and polydispersity index (PDI). The final block copolymer composition was calculated from ¹H-NMR spectroscopy by comparing the peak area of the styrene protons at 6.3-7.2 ppm with the peak area of 4-methoxy styrene at 3.7ppm. Block copolymer PDI is determined by SEC.

HNMR of the diblock PS-b-4OHS was carried out in CdCl₃ in the presence of trace amount of methanol to solubilize polymer.

Solubility:

Poly(styrene-b-eth4-hydroxystyrene) is soluble in THF.
