

Sample Name: Poly(styrene-*b*-methyl methacrylate)  
*(polymethylmethacrylate rich in syndiotactic contents > 78%)*

Sample #: P10325-SMMA

Structure:

Composition:

Mn x 10 <sup>3</sup> S- <i>b</i> -MMA	PDI
1,000.0- <i>b</i> -140.0	1.20
T <sub>g</sub> for PS block: 107°C	T <sub>g</sub> for PMMA block: 132 °C
dn/dc in THF at 35 °C	0.107
Mn values obtained from LS detector on line:	--

#### Synthesis Procedure:

**By anionic process:** For further details please see our published articles.<sup>1-5</sup>

**Characterization:** Polymer analyzed by size exclusion chromatography (SEC) to obtain the molecular weight and polydispersity index (PDI). The final block copolymer composition was calculated from <sup>1</sup>H-NMR spectroscopy by comparing the peak area of the poly(methyl methacrylate) protons (eg.—OCH<sub>3</sub> at 3.6ppm) with of aromatic protons of polystyrene at 6.3-7.2 ppm. Copolymer PDI is determined by SEC. Thermal analysis of the samples was carried out using a differential scanning calorimeter (TA Q100) at a heating rate of 10°C/min. The inflection glass transition temperature (T<sub>g</sub>) of the sample has been considered.
