

## Sample Name: Poly(n-butyl acrylate)

### Sample #: P3138-nBuA

#### Structure:

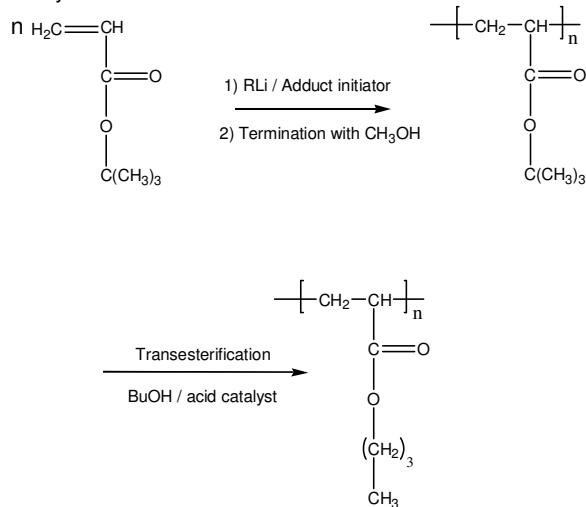

#### Composition:

Mn x 10 <sup>3</sup>	PDI
13.0	1.13

#### Synthesis Procedure:

Poly(n-butyl acrylate) is obtained by living anionic polymerization of t-butyl acrylate followed by transesterification with n-butanol in the presence of catalyst.<sup>1-4</sup> The reaction scheme is shown below:

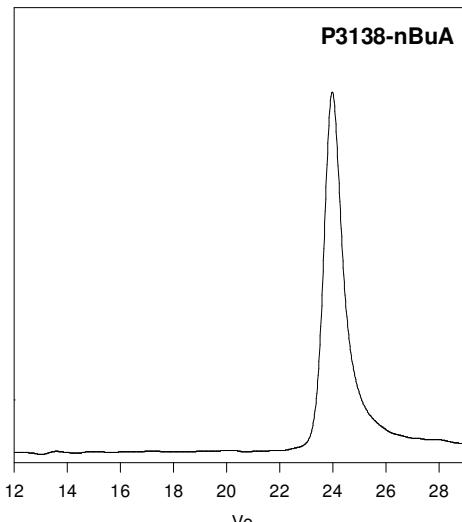

#### Characterization:

The molecular weight and polydispersity index (PDI) are obtained by size exclusion chromatography (SEC) in THF. SEC analysis was performed on a Varian liquid chromatograph equipped with refractive and UV light scattering detectors. Three SEC columns from Supelco (G6000-4000-2000 HXL) were used with triple detectors from Viscotek Co.

#### Solubility:

Poly(n-butyl acrylate) is soluble in THF, toluene and  $\text{CHCl}_3$ . This polymer precipitates from ethanol and methanol containing 10-15% water.

#### SEC of the Homopolymer:

Size Exclusion Chromatography of Poly n-butyl acrylate:

$M_n=13000$ ,  $M_w=14700$ , PI=1.13
