

Product Profile

Identification

Product Name: Amino Terminated Polystyrene

Product Lot Number: P4502-SNH2

Chemical Architecture:

Composition:

Mn (g/mole)	2,500
Mw (g/mole)	2,900
Mw/Mn	1.10
Primary Amino group test using ninhydrin	Blue color pass

Method of Synthesis

Amino terminated polystyrene was synthesized by anionic living polymerization with different end-grouping strategies. The reaction schemes are shown below:

Solubility in different solvents:

THF	√	Methanol	X
CHCl_3	√	Hexane	X
Toluene	√		

Validation of Architecture

A. Gel Permeation Chromatography (GPC), SEC Profile:

The molecular weight and polydispersity index of this polymer were determined by size exclusion chromatography (SEC) using a Varian liquid chromatograph equipped with a UV and refractive index detector. However, amino terminated polystyrene was found to interact with chromatography columns and therefore the amino group was protected by reaction with 1-naphthyl isocyanate before GPC analysis. Removal of the protecting group was confirmed by UV spectroscopy and the degree of functionality was confirmed by titration with HClO₄ using crystal violet as the indicator.

P4502-SNH2

Size exclusion chromatography of Amino Terminated polystyrene

$M_n=2500$, $M_w=2900$, $PI=1.15$, functionality>0.98%
