

## Sample Name: Poly(n-nonyl acrylate)

Sample #: P9697-nNA

Structure:

Composition:

$M_n \times 10^3$	PDI
550.0	1.19

### Synthesis Procedure:

Poly(n-nonyl acrylate) is obtained by group transfer or anionic polymerization of n-nonyl acrylate.

### Characterization:

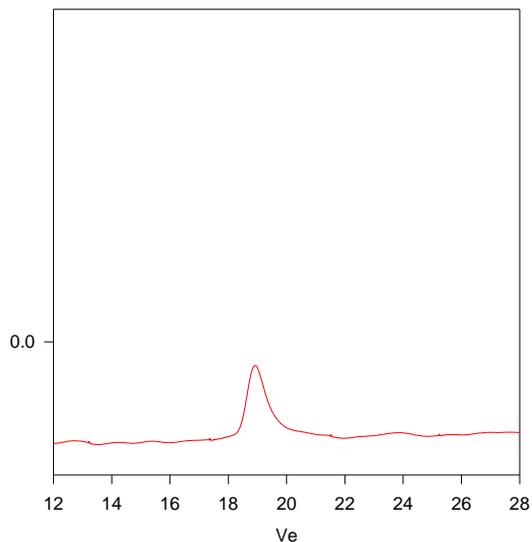

The molecular weight and polydispersity index (PDI) are obtained by size exclusion chromatography (SEC) in THF. SEC analysis was performed on a Varian liquid chromatograph equipped with refractive and UV light scattering detectors. Three SEC columns from Supelco (G6000-4000-2000 HXL) were used with triple detectors from Viscotek Co.

### Solubility:

Poly(n-butyl acrylate) is soluble in THF, toluene and  $CHCl_3$ . This polymer precipitates from ethanol and methanol containing 10-15% water.

### SEC of the Homopolymer:

P9697-nNA

Size Exclusion Chromatography of Poly(n-nonyl acrylate):  
 $M_n = 550,000$ ,  $M_w = 654,000$ ,  $M_w/M_n = 1.19$
