

Sample Name:

Poly (ethylene glycol) mono-benzyl ether

Sample #: P10964-EGBenzyl

Structure:

Composition:

$M_n \times 10^3$	PDI
5.5	1.09

Synthesis Procedure:

Poly (ethylene glycol) is obtained by living anionic polymerization.

Characterization:

By Size exclusion chromatography (SEC): Varian liquid chromatograph equipped with UV and refractive detector. SEC columns from Supelco were used with THF containing 2 vol% $(\text{Et})_3\text{N}$ as the eluent. The molecular weights were determined using light scattering detector and viscosity detector. The molecular weights and the polydispersity indice were calculated.

An aqueous GPC column from Supelco(G5000 PWXL) was also used with 0.5 M acetic acid and 0.8 M NaNO_3 as the eluent. It was kept at a constant temperature of 50°C . The flow rate was 1.0 ml/min. The column was calibrated with monodisperse poly(ethylene oxide) standards. The molecular weights and the polydispersity index of polyethylene oxide were calculated by using GPC software.

Purification of the obtained polymer:

Purification of the obtained polymer was carried out rigorously as follows to ensure the removal of the catalyst side product:

1. Dissolved the polymer in de-ionized distilled water to remove the any insoluble organic catalyst side product.
2. Polymer extracted from water with dichloromethane.
3. Polymer solution in dichloromethane was dried over anhydrous sodium sulfate.
4. Solution filtered and than passed through a column packed with basic Al_2O_3 .
5. Solution concentrated on rota-evaporator
6. Solution precipitated in cold diethyl ether.
7. Dried under vacuum for 48h at 38°C .

Solubility:

Poly(ethyl glycol) is soluble in toluene, THF, water and CHCl_3 . The polymer is insoluble in hexane, ether, isopropanol and cold ethanol.

^1H NMR of the polymer:

SEC for the polymer:

P10964 EG-Benzyl

Size exclusion chromatography:

— Poly(ethylene glycol) benzyl ether $M_n=5500$, $M_w=6000$, $PI=1.09$
