

**Sample Name:** Poly(ethyl acrylate)

**Sample #:** P8259A-EA

**Structure:**

**Composition:**

Mn x 10 <sup>3</sup>	PDI
284.0	1.17

**Synthesis Procedure:**

Poly(ethyl acrylate) is obtained by living anionic polymerization of t-butyl acrylate followed by transesterification with ethanol:

**Characterization:**

The molecular weight and polydispersity index (PDI) are obtained by size exclusion chromatography (SEC) in THF. SEC analysis was performed on a Varian liquid chromatograph equipped with refractive and UV light scattering detectors. Three SEC columns from Supelco (G6000-4000-2000 HXL) were used with triple detectors from Viscotek Co.

**Solubility:**

Poly(ethyl acrylate) is soluble in THF, hexanes (low MW), toluene and CHCl<sub>3</sub>. This polymer precipitates from ethanol and methanol containing 10-15% water.
