

Sample Name: Poly(t-butyl methacrylate-b-2-vinyl pyridine)

Sample #: P4352-tBuMA2VP

Structure:

Composition:

Mn x 10 ³ tBuMA-2VP	PDI
15-b-70	1.4
T _g for tBuMA block	104°C
T _g for 2VP block	Not distinct

Synthesis Procedure:

Poly(t-butyl methacrylate-b-2-vinyl pyridine) is synthesized by living anionic polymerization with sequence addition of t-butyl methacrylate followed by 2-vinyl pyridine in THF using an RLi/LiCl adduct.

Characterization:

An aliquot of the anionic poly(t-butyl acrylate) block was terminated before addition of 2-vinyl pyridine and analyzed by size exclusion chromatography (SEC) to obtain the molecular weight and polydispersity index (PDI). The final block copolymer composition was calculated from ¹H-NMR spectroscopy by comparing the peak area of the t-butyl acrylate protons at about 1.43 ppm with the peak area of the vinyl pyridine protons at about 8.2 ppm. Copolymer PDI is determined by SEC.

Thermal analysis of the samples was carried out using a differential scanning calorimeter (TA Q100) at a heating rate of 10°C/min. The inflection glass transition temperature (T_g) has been considered.

Solubility:

Poly(tert butyl methacrylate-b-4 vinyl pyridine) is soluble in CHCl₃, DMF, and may also solubilize in ethanol or methanol depending on the composition.

¹H-NMR Spectrum of the block copolymer:

Sample # PP4352-StBuMA2VP

SEC of the tBuMA block:

Thermogram for the polymer
