

Sample Name: Poly(t-butyl acrylate)

SEC of Sample:

Sample #: P6613-tBuA

Structure:

Composition:

$M_n \times 10^3$	PDI
443.4	1.50

Synthesis Procedure:

Poly(t-butyl acrylate) is obtained by living anionic polymerization of t-butyl acrylate.¹⁻⁴

Characterization:

The molecular weight and polydispersity index (PDI) are obtained by size exclusion chromatography (SEC) in THF. SEC analysis was performed on a Varian liquid chromatograph equipped with refractive and UV light scattering detectors. Three SEC columns from Supelco (G6000-4000-2000 HXL) were used with triple detectors from Viscotek Co.

Thermal analysis of the samples was carried out using a differential scanning calorimeter (TA Q100) at a heating rate of 10°C/min. The inflection glass transition temperature (T_g) of the sample has been considered.

Solubility:

Poly(t-butyl acrylate) is soluble in THF, hexanes (low MW), toluene and CHCl_3 . This polymer precipitates from ethanol and methanol containing 10-15% water.

T_g vs MW for selected poly t-butyl acrylate

$M_n \times 10^3$	T_g (°C)	$M_n \times 10^3$	T_g (°C)
0.75	-15	11.6	28
1.4	-5	22	32
2	7	65	35
4.5	12	1128	38

P6613-tBuA

Size exclusion chromatograph of Poly(tert-butyl acrylate):

$M_n=443,400$, $M_w=665,000$, $PI=1.50$
